Two terms used most frequently in the industry are “patent attorney” and “patent agent”, and it is therefore of prime importance to understand the difference between the two clearly. A patent agent is someone who possesses at the minimum an undergraduate degree, has cleared the Indian patent agent examination, and has registered himself as a registered patent agent with the IPO.

The Indian patent agent examination is generally conducted by the IPO once a year. A patent attorney on the other hand is an advocate who practices IP law and may or may not be a patent agent. Further, a patent attorney must be registered with the Bar Council of India as an advocate. An advocate is not eligible to write the Indian patent agent exam if he is not a graduate of a scientific domain. These limitations for advocates often result in a loss of direction for them regarding what potential opportunities await them if they want to practice IPR and in particular patent law.

## Fractional Orbital Bombardment System

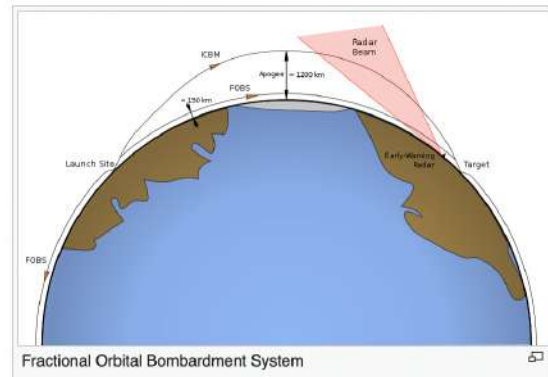

From Wikipedia, the free encyclopedia

A **Fractional Orbital Bombardment System (FOBS)** is a warhead delivery system that uses a low earth orbit towards its target destination. Just before reaching the target, it deorbits through a retrograde engine burn.<sup>[1]</sup>

The **Soviet Union** first developed FOBS as a nuclear-weapons delivery system in the 1960s. It was one of the first Soviet efforts to use space to deliver nuclear weapons. In August 2021, the **People's Republic of China** tested a weapon that combined a FOBS with a **hypersonic glide vehicle**.<sup>[1]</sup>

Like a **kinetic bombardment** system but with nuclear weapons, FOBS had several attractive qualities: it had no range limit, its flight path would not reveal the target location, and warheads could be directed to North America over the **South Pole**, evading detection by **NORAD**'s north-facing early warning systems.
